Anitej Srivastava

New York City, NY | +1 (929) 294-4007 | as19440@nyu.edu | GitHub | LinkedIn

Education

- **New York University** — New York, NY
  Master of Science, Computer Science; GPA: 3.74/4.0 — *Sep 2024 - Dec 2025*
  Courses: *Machine Learning, Cloud Computing, Big Data, Computer Vision, Human Computer Interaction*
- **Vellore Institute of Technology** — Vellore, India
  Bachelor of Technology - Computer Science and Engineering; GPA: 3.96/4.0 — *Jul 2019 - Jun 2023*
  Courses: *Data Structures and Algorithms, Operating Systems, Computer Networks, Artificial Intelligence, NLP*

Technical Skills

- **Languages** Java, Swift, Objective-C, Dart, Python, HTML, CSS, JavaScript
- **Frameworks** SwiftUI, Flutter, REST, AWS Lambda, DynamoDB, API Gateway, Swagger API, AWS S3, Amazon Bedrock, OpenSearch, PyTorch, AWS Cognito, AWS IAM, AWS SQS, AWS SES, AWS EKS, Apache Spark, pySpark, AWS EMR, Scikit, AWS Amplify, SpaCy, TensorFlow, Keras, ReactJS, Next.js
- **Tools & Architecture** Xcode, TestFlight, Fastlane, App Store Connect, Crashlytics, AWS, GIT, GitHub, Docker, Kubernetes, OpenAI, Claude, Llama 3.1, Google Colab, MySQL, iOS, macOS, Linux, MVVM, VIPER, MVC

Work Experience

- **Yahoo** — New York, NY
  Software Apps Engineer II - iOS — *Jan 2026 - Present*
  - **Planner iOS Experience:** Designed and implemented Planner removal flows and smart client-side logic to determine when and where tasks and events should surface across Yahoo Mail iOS, improving contextual productivity experiences for users.
  - **Notifications & System Extensions:** Built Planner notification flows using **APNs** and **Notification Service Extension (NSE)**, enabling richer, timely task and event notifications while handling client-side payload processing and presentation logic.
  - **GraphQL, Caching & Performance:** Integrated with backend services through an internal **GraphQL broker**, optimized network call patterns, and implemented caching strategies using Yahoo's internal persistence layer built on top of **DataKit**.
  - **Generative AI Integration:** Integrated on-device Generative AI capabilities leveraging the **Apple Foundation Models** framework to power mail summarization & action extraction with increased privacy, DV lift & cost savings.
  - **Prompt Engineering & Concurrency:** Utilized **@Generable structs** alongside advanced prompt engineering and modern **Swift concurrency** to optimize and structure on-device AI responses.
  - **UIKit & SwiftUI Bridging:** Built production iOS interfaces by bridging **UIKit** and **SwiftUI**, enabling modern UI development while maintaining compatibility with Yahoo Mail's existing iOS architecture.
- *iOS Engineer Intern* — *Jun 2025 - Dec 2025*
  - **Saved Searches Feature:** Architected a complex search persistence system using **MVVM & VIPER patterns** allowing users to save search queries with contacts, filters, date ranges & custom names using **Swift & Objective-C**. Leveraged custom DataKit framework on top of **CoreData SQLite** for efficient CRUD operations and caching.
  - **Smart Nudges AI Assistant:** Spearheaded end-to-end ideation, design, and implementation of an AI-driven feature extracting actionable items from emails including calendar events, RSVPs, bookings, and order tracking. Used **async/await**, **Actors**, **Combine**, and **RxSwift** to update calendar integrations and client state safely.
  - **Onboarding & User Experience:** Developed contextual tooltips using NotificationCenter-driven pipelines to observe subscriptions and maintain priority-based onboarding events, improving feature adoption across Yahoo Mail iOS.
- **Hoomanely Inc** — Bengaluru, India
  iOS & Backend Engineer — *Jan 2024 – Jun 2024*
  - **EverWiz iOS App Backend Architecture:** Built app's backend infrastructure from scratch, architecting scalable cloud-native data pipeline using AWS services to power semantic search over 50k+ vet-verified pet articles for iOS app users. **App Store Link**
  - **AI-Powered Search Engine:** Developed serverless search backend with **GPT-4o integration** and Amazon OpenSearch vectorization, enabling low-latency AI-powered search experiences delivered through iOS app interfaces.
  - **Production System & iOS Integration:** Implemented fault-tolerant, event-driven architecture using **AWS Lambda, SQS, and API Gateway** to ensure seamless user experience across pet care search functionalities.
  - **0-to-1 Product Launch:** Shipped production system supporting iOS app's core search feature, contributing to successful App Store launch and establishing technical foundation for mobile-first pet care platform.
- **BYJU'S Learning App** — Bengaluru, India
  iOS Engineer - Member of Technical Staff 1 — *Sep 2022 - Jan 2024*
  - **Real-time Video & Chat Platform:** Architected and developed student-tutor video and chat features using **Swift, SwiftUI, MVC & MVVM patterns** and AVFoundation, powering 15k–20k daily interactive classes and maintaining 99.9% uptime for 150M+ global users.
  - **Virtual Classroom Features:** Built interactive noticeboards with custom UIKit components and Core Animation, enhancing engagement for 30k–35k daily iOS sessions through seamless in-app communication features.
  - **iOS Build & Release Automation:** Optimized build pipelines using **TestFlight, Jenkins CI/CD**, and App Store Connect, integrating Crashlytics and analytics SDKs for real-time performance monitoring and crash reporting.
  - **Performance & Scalability:** Scaled iOS classroom infrastructure to support 200 concurrent users per session using efficient memory management and background processing, enabling seamless learning experiences for millions of students.
